

INSTRUCTIONS

DFP1***03**

DFP100 WITH REDUCED MINIMUM SETTING ON GND UNIT AND MINIMUM SETTING FOR UNDERVOLTAGE PICKUP

Introduction

These instructions, GEK-105580 together with GEK-105545, constitute the complete instructions for the DFP1*****03.

Description

This relay has the following differences from the standard relay described in GEK-105545:

The ranges of the TOC for GND has been changed to 0.010 - 0.12 amps RMS and the range for IOC and DEFINITE TIME has been changed to 0.010 - 1.60 amps rms. The setting range for UNDERVOLTAGE pickup has new range [5 -180]. The settings range for the OVERVOLTAGE pickup has new range [5-180].

These instructions do not purport to cover all details or variations in equipment nor provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise which are not covered sufficiently for the purchaser's purposes, the matter should be referred to the General Electric Company. To the extent required the products described herein meet applicable ANSI, IEEE and NEMA standards; but no such assurance is given with respect to local codes and ordinances because they vary greatly.

Calculations of Settings
